Professional Summary

I am a Software Engineer with nearly three years of professional experience in software quality assurance, functional and regression testing, and quality engineering across web and mobile applications. Skilled in testing complex software systems, identifying defects and edge cases, and ensuring software reliability through thorough testing practices. Experienced in collaborating with cross functional teams, taking ownership of features, and sharing technical knowledge with colleagues. Very passionate about technology and problem solving, with hands on experience building internal automation tools with the help of AI assisted development using Playwright, Electron, and Node.js to streamline workflows and improve team productivity.

Technical Skills

Development & Programming: JavaScript, Node.js, Electron, HTML/CSS, Python, SQL; exposure to Java, C/C++, and ASP.NET MVC

Testing & automation: Playwright, Selenium, Postman, API testing, functional and regression testing, smoke testing, negative testing, test-case design

Databases & tools: Oracle Database/SQL, MySQL, Microsoft SQL Server, Git/GitHub, REST API workflows, WordPress

Additional experience: AI assisted coding and debugging, technical documentation, peer training, computer vision research

Professional Experience

Therap (BD) Ltd. — Software Engineer, QA Jan 2024 – Present
Dhaka, Bangladesh

- Developed and deployed **Therap Bulk Data Hub**, an internal tool for generating test data through Playwright automation, API requests, and database operations; reduced creation time for **100 Case Note records from about 10 minutes to 45–60 seconds** (approximately 90% less time).
- Developed the **Therap Automation Hub** using AI-assisted coding, Electron, Node.js, and Playwright, transforming automation scripts into a user-friendly desktop application that enables teammates to execute automated workflows of data generation across ISP Billing, Case Note Billing, Service Authorization, and General Bill Data Input without coding knowledge or direct IDE interaction.
- Shared quality assurance ownership for **Real-Time Service Data (RTSD)**, a face-recognition-based attendance workflow synchronized with a web dashboard; the feature was demonstrated at Therap Nationals 2026.
- Owned testing for ISP and Case Note portions of billing scalability improvements, validating higher service-selection limits and chunk-based processing; observed search latency decline from **2.13 s to 1.48 s** for a 218-service-line test case.
- Supported colleagues through training on billing workflows and guidance on automation and AI-assisted test analysis; used AI tools to expand edge-case coverage, review technical change notes, and refine test documentation.
- Previously served as a primary software qa engineer for Therap's IoT R&D work, contributing to testing and development activities involving connected devices and supporting software.

Gameriv.com — Backend Engineer & Content Writer Jul 2022 – Apr 2023
Dhaka, Bangladesh

- Worked on the WordPress-based gaming publication, combining website backend responsibilities with technical and editorial content production.

Selected Engineering Projects

Therap Bulk Data Hub 2026

- Internal application with a user-facing interface for running bulk data creation flows using browser automation, APIs, and Oracle database operations; designed to be usable by colleagues without coding knowledge. GitHub repository

Therap Automations Hub 2026

- Cross-platform Electron/Node.js desktop interface to let testers execute existing automation scripts without working directly in an IDE. GitHub repository

Social Media Toxicity Detection 2022

- Compared classical machine-learning classifiers using text preprocessing, CountVectorizer, and TF-IDF; reported approximately 94% accuracy, precision, and F-score for leading models.

Research Publications

- **A Lane Detection Framework for Automated Vehicle Using Computer Vision.** Springer, *Lecture Notes in Electrical Engineering* (PEIS 2023). DOI: 10.1007/978-981-99-7383-5_19.
- **Efficient Lane Detection and Keeping for Autonomous Vehicles in Real-World Scenarios.** IEEE ICCIT 2023, IEEE Xplore. DOI: 10.1109/ICCIT60459.2023.10440972.

Education & Leadership

BSc in Computer Science and Engineering, Ahsanullah University of Science and Technology 2023
CGPA: 3.188/4.00

Senior Panel Member, AUST Programming & Innovation Club 2021 – 2023
Helped organize programming contests, hackathons, Robo Soccer, and industry seminars engaging 200+ students.
